Paper 1 Physical geography

Time allowed: 2 hours 30 minutes

- a pencil
- a rubber
- a ruler.

You may use a calculator.

- Answer **all** questions in Section A.
- Answer **either** Question 2 **or** Question 3 **or** Question 4 in Section B.
- Answer **either** Question 5 **or** Question 6 in Section C.

- The total number of marks available for this paper is 120.

**DO NOT WRITE ON THIS PAGE
ANSWER IN THE SPACES PROVIDED**

Section A**Water and carbon cycles**

Answer **all** questions.

0 1 . **1** Explain the concept of dynamic equilibrium in relation to the water cycle.

[4 marks]

Question 1 continues on the next page

Figure 1 represents data from a climate model for Africa. The map shows how rainfall totals are expected to change in Africa by 2099 compared with 1986–2005 averages. The graphs show predictions for rainfall change by month between 2080 and 2099, compared with average rainfall taken from 1986–2005.

Figure 1

[20 marks]

Question 3 Coastal systems and landscapes

0 3 . **1** Explain the concept of the sediment cell.

[4 marks]

Question 3 continues on the next page

Figure 5 shows data relating to coastal flooding in Great Britain. The investigation is trying to determine whether any stretch of the coastline of Great Britain may be more or less susceptible to coastal flooding. The 96 most severe floods have been analysed.

The coastlines have been split into four broad categories: north west, north east, south west and south east.

This is the null hypothesis: there is no significant difference in the location of the worst floods to affect Great Britain.

Below is a partly completed Chi-squared test.

Figure 5

	North west	North east	South west	South east	Total
O	22	16	38	20	96
E	24	24	24	24	96
O – E	–2	–8	14	–4	-
$\frac{(O - E)^2}{E}$	4	64		16	-
$\frac{(O - E)^2}{E}$	0.17		8.17	0.67	$\chi^2 =$

O – Observed frequencies

E – Expected frequencies

Figure 6

Critical values for Chi-squared with 3 degrees of freedom.

Degrees of freedom	Significance level	
	0.05	0.01
3	7.82	11.34

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

- 0 3 . 3** Using **Figure 7** and your own knowledge, assess the role of mass movement upon the development of this area of the Holderness coastal landscape.

[6 marks]

Figure 7

This source has been removed due to third-party copyright restrictions.

Holderness is overlaid with unconsolidated glacial deposits which lie on top of chalk. The landscape is dominated by deposits of till, boulder clays and glacial lake clays. The glacial deposits form a continuous lowland plain. Rainfall is below national average but the area is prone to heavy storms.

0 3 . 4

'No amount of coastal intervention by people can halt the natural processes which continue to present potentially serious risks to coastal communities now and even more so in the future.'

To what extent do you agree with this view?

[20 marks]

[illegible]

Question 4 Glacial systems and landscapes

0 4 . **1** Explain the development of warm based glaciers.

[4 marks]

Question 4 continues on the next page

Figure 8 shows the location of three US glaciers.

Figure 9 shows the change in their size (mass balance) between 1958 and 2005.

Figure 10 shows the cumulative impact of the annual change in mass balance within the three glaciers.

Figure 13

All buildings in the Svalbard settlements are built on piles driven into the permafrost, and roads, bridges, airports and other infrastructure are also constructed on permafrost. In addition, the permafrost is essential for stabilising steep mountainsides. There are also ramifications for natural vegetation. The most important consequence of the warming and thawing of the permafrost is, that large volumes of greenhouse gases, like CO₂ (carbon dioxide) and CH₄ (methane), may be released if ever deeper layers of the permafrost thaw. These gases have been kept out of the atmosphere because the organic carbon has been frozen in the ground.
